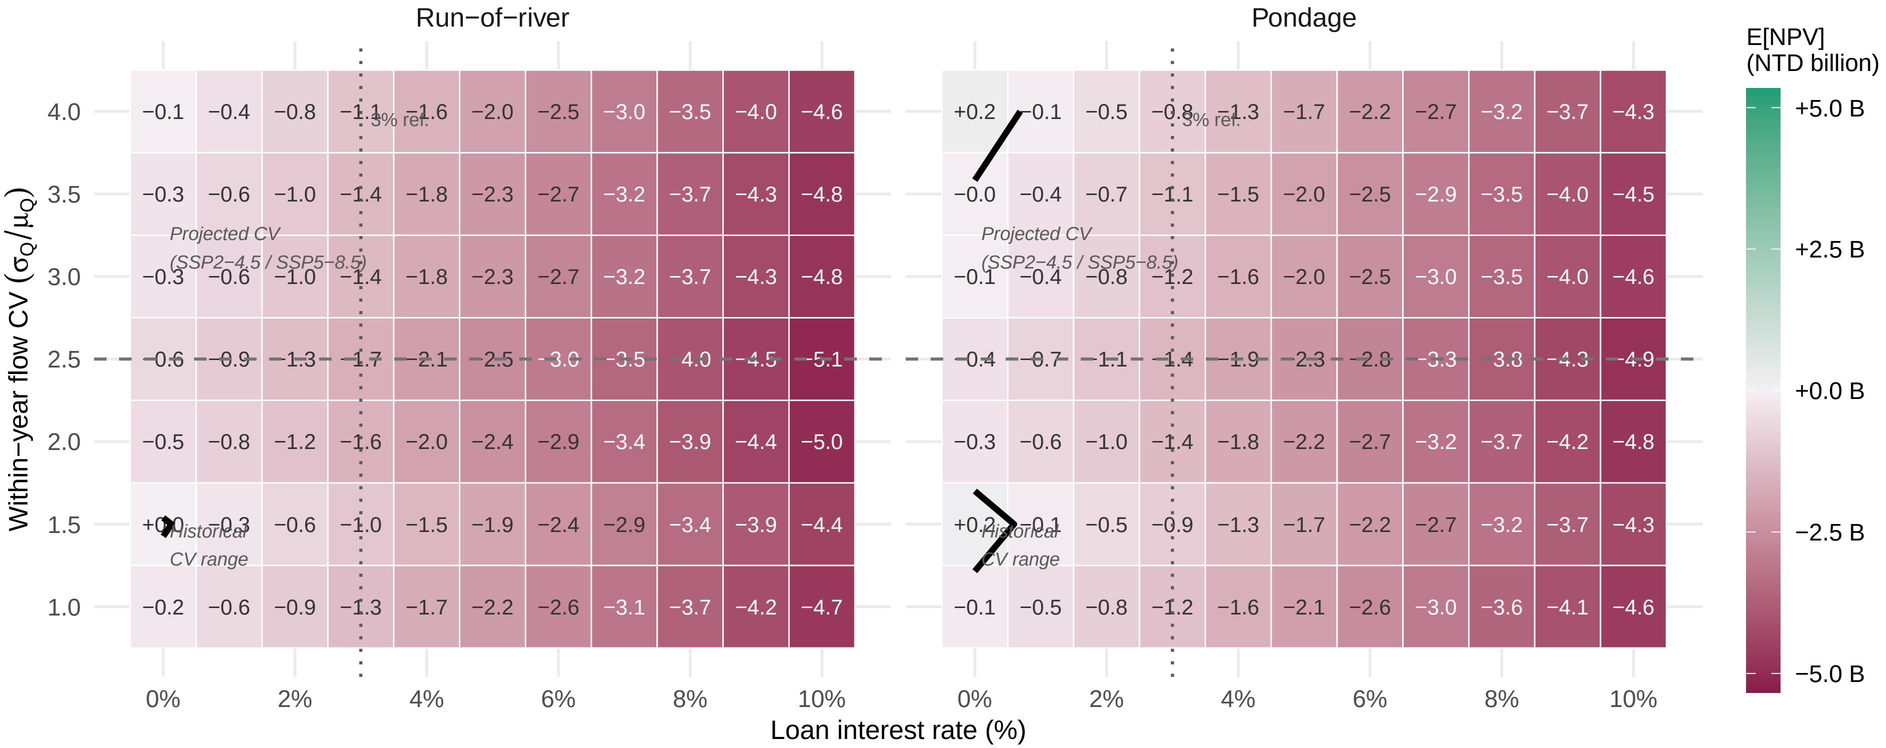
E[NPV] — E[NPV] — C3: CAPEX = NTD 6.4B (1999 EIA ....)

Expected NPV across bootstrap climate replicates (NTD billion, cell−labelled). Deep green = large expected profit; deep purple−red = large expected loss.
Black contour = E[NPV] = 0 (break−even). Upper−left = profit zone; lower−right = loss zone. Dashed: CV = 2.5 (historical upper bound). Dotted: 3% referen



E[NPV] = mean NPV across bootstrap replicates — standard financial decision criterion (NPV maximisation).
Two−layer bootstrap: block resample (Layer 1) + CV scaling (Layer 2). PPA = NTD 6.0/kWh; LTV = 80%; equity rate = 8%; project life = 35 yr.
