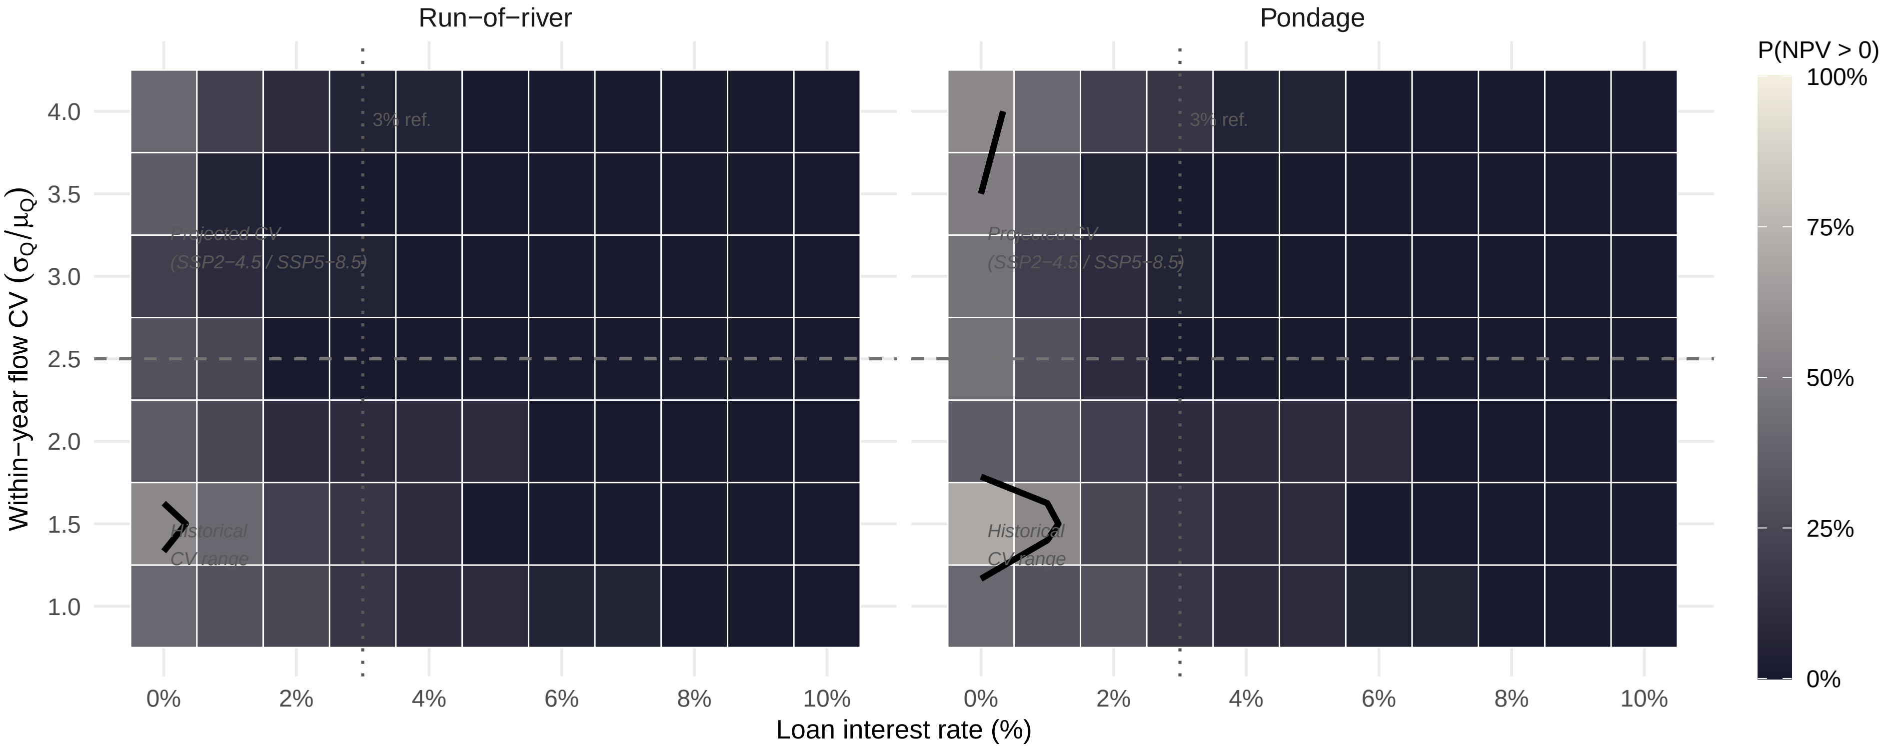
P(NPV > 0) — P(NPV > 0) — C3: CAPEX = NTD 6.4B (1999 EIA ....)

Probability of positive NPV across bootstrap climate replicates. Cream = high confidence of profit (P −> 100%); dark/black = high risk of loss (P −> 0%).
Black contour = 50% break−even boundary (equal chance of profit or loss). Dashed: CV = 2.5 (historical upper bound). Dotted: 3% reference loan rate.



P(NPV > 0): fraction of bootstrap replicates with NPV > 0. Two−layer bootstrap: block resample (Layer 1) + CV scaling (Layer 2).
IPCC AR6 Ch.11 (2021); Shiau & Huang (2014); Tung et al. (2016). PPA = NTD 6.0/kWh; LTV = 80%; equity rate = 8%; project life = 35 yr.
