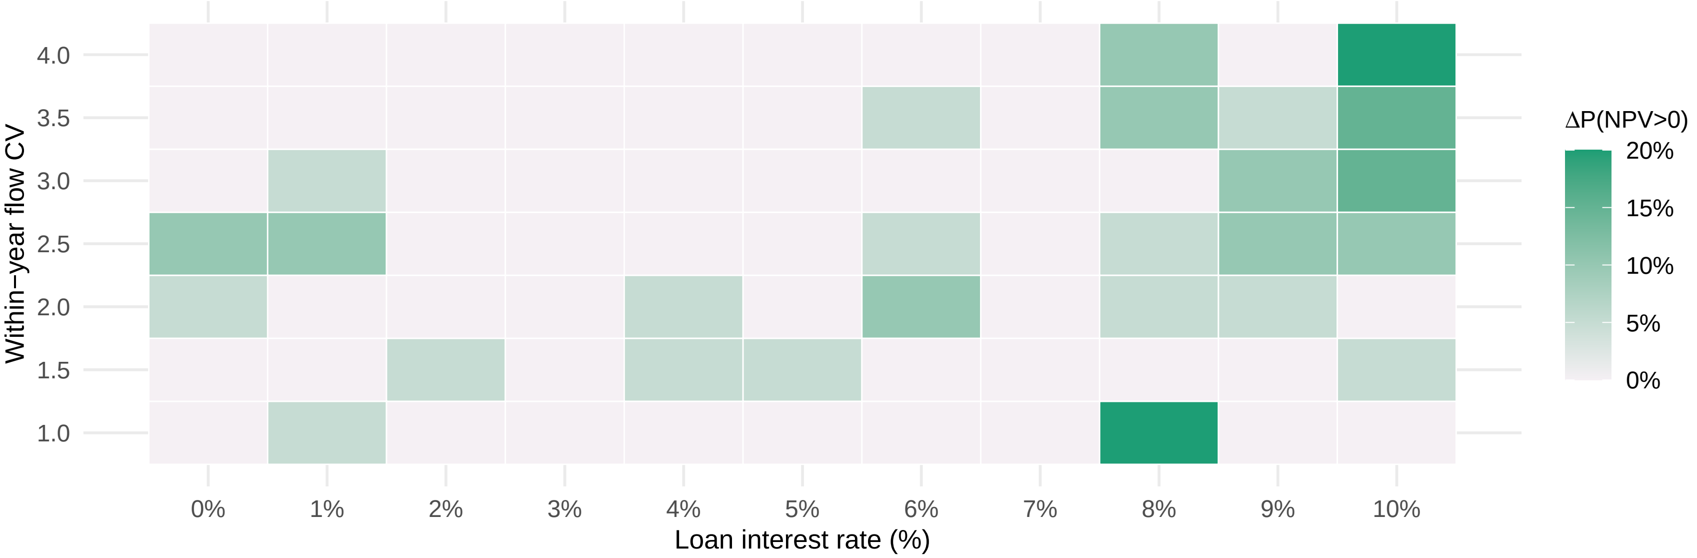
Pondage Advantage over Run−of−River

Difference in P(NPV>0): $\Delta = P_{Pondage} - P_{Run{-}of{-}river}$



Shown for C1 (CAPEX = NTD 2.5B); LTV = 80%; equity rate = 8%; project life = 35 yr.
Positive delta (green): pondage achieves higher P(NPV>0) than run−of−river.
Pattern is consistent across all four CAPEX estimates (C1–C4).
