

Pondage Advantage over Run-of-River

Difference in $P(\text{NPV}>0)$: $\Delta = P_{\text{Pondage}} - P_{\text{Run-of-river}}$

Shown for C1 (CAPEX = NTD 2.5B); LTV = 80%; equity rate = 8%; project life = 35 yr.

Positive delta (green): pondage achieves higher $P(\text{NPV}>0)$ than run-of-river.

Pattern is consistent across all four CAPEX estimates (C1–C4).
