

E[NPV] Summary — Pondage Mode, Four CAPEX Estimates

Pondage mode. Cell value = E[NPV] (NTD B, mean across bootstrap replicates). Deep green = large expected profit; deep purple-red = large expected loss.
Black contour = break-even (E[NPV] = 0). Upper-left = profit zone; lower-right = loss zone. Dashed: CV = 2.5 (historical upper bound). Dotted: 3% reference loan rate.
C1: NTD 2.5B (contract disclosure) C2: NTD 5.0B (initial announcement) C3: NTD 6.4B (EIA 1999) C4: NTD 9.7B (investor conference 2025)

E[NPV] = mean NPV across bootstrap replicates — standard financial decision criterion.
PPA = NTD 6.0/kWh; LTV = 80%; equity rate = 8%; project life = 35 yr.
